

In the Amazon rain forest it is always hot, and in that heat everything grows, and grows, and grows. The tops of the trees in the rain forest are called the canopy. The canopy is a sunny place that touches the sky. The animals that live there like lots of light. Colorful parrots fly from tree to tree. Monkeys leap from branch to branch. The bottom of the rain forest is called the understory. The animals that live in the understory like darkness. There, silent snakes curl around hanging vines. Graceful jaguars watch and wait.

And in this steamy environment the great Kapok tree shoots up through the forest and emerges above the canopy.

This is the story of a community of animals that live in one such tree in the rain forest.
